PROFESSIONAL SUMMARY

AI Engineer with 9+ months of experience building production LLM-based systems at Lanciere Technologies. Worked on real-time voice pipelines, evaluation workflows, and backend services using FastAPI and GPT-based integrations. Interested in AI engineering and backend roles focused on building practical, scalable systems.

SKILLS

Programming Languages: Python, JavaScript, SQL

Backend Development: FastAPI, Django, Django REST Framework, Flask

AI/ML: LangChain, Hugging Face Transformers, PyTorch, TensorFlow, scikit-learn, OpenCV, SBERT, FAISS

Databases: MongoDB, MySQL, SQLite, Redis

Tools: Git, GitHub, VS Code, MobaXterm

Frontend (Basic): React.js, HTML5, CSS3, Bootstrap

EXPERIENCE

Associate Engineer

Aug 2025 – Present

Lanciere Technologies Private Limited

- Built and scaled multi-module LLM-based assessment systems on iMentora, including daily voice standups, weekly mock interviews, and automated evaluation workflows using GPT-4 and LangChain.
- Developed FastAPI-based microservices for real-time voice interaction, integrating speech-to-text (Whisper via Groq) and text-to-speech (Edge TTS) pipelines for seamless user experience.
- Implemented LLM-driven question generation and evaluation pipelines using structured prompts and MongoDB-backed knowledge bases, ensuring consistent and non-repetitive outputs.
- Integrated biometric and engagement monitoring systems including face recognition, speaker verification, and real-time session tracking for secure assessments.
- Led system-level improvements including migration from monolithic architecture to microservices, enabling independent scaling and deployment of platform modules.
- Built and optimized backend workflows for attendance tracking, report generation, and session analytics with high reliability and low latency.

Associate Engineer Intern

Aug 2025 – Jan 2026

Lanciere Technologies Private Limited

- Developed an AI-based attendance verification pipeline using continuous face recognition, handling frame processing, embedding comparison, and secure data persistence.
- Contributed to the initial development of LLM-based voice assessment workflows, including evaluation logic and structured output generation.
- Built backend services using FastAPI and Django REST Framework, supporting real-time interaction and system integration.

PROJECTS

Edubot – AI-Powered Student Assistant

([GitHub](#))

- Built a full-stack AI chatbot using React.js (frontend) and FastAPI (backend) to automate queries on admissions, fees, placements, and scholarships.
- Implemented semantic search with SBERT + FAISS and integrated Google Generative AI for context-aware responses.
- Enabled multilingual voice/text support (English, Telugu, Hindi) using Deep Translator and gTTS.

HemoHub – Blood Inventory Optimizer

([GitHub](#))

- Built with Django, SQLite, and Bootstrap to manage donor data, blood components, and expiry tracking.
- Integrated Celery, Redis, and Django Channels to send real-time notifications for expiring blood units, minimizing blood wastage.

Speech Emotion Detection

- Built an LSTM-based model to classify emotions from audio speech using TensorFlow, Keras, and Scikit-learn.
- Extracted MFCC features using Librosa; achieved high accuracy on the RAVDESS dataset and deployed via Flask web app.

EDUCATION

Maturi Venkata Subba Rao Engineering College	2025
Bachelor of Engineering in Information Technology, CGPA: 8.88	
Sri Gayatri Junior College	2021
Intermediate, Percentage: 97.6	
Ravindra Bharathi School	2019
Secondary School Certificate (SSC), CGPA: 9.8	

CERTIFICATIONS

• AI-ML Virtual Internship	<i>May - July 2023</i>
• Data Science Master Virtual Internship	<i>July - September 2024</i>
